Mr. Marty Cayton
Amerizon Wireless
1211 Ireland Drive, Suite 1
Fayetteville, NC 28304

Mr. Marty Cayton:

I have had the pleasure of working with Amerizon and the Networkcar system since April of 2005. Since that time, ATMC has had frequent and consistent contact with Amerizon regarding your services and you have consistently met our high expectations.

We have had numerous positive results from our implementation of Networkcar from Amerizon into our 92 vehicles. Although ATMC has historically maintained strict driving policies, the installation of the fleet monitoring has improved our drivers' behavior behind the wheel. This has resulted in a reduction in overall travel speeds and soft stops. While travel speed improvements are more difficult to quantify, in some areas we have measured up to a 53% reduction in idle times. In addition, we have reduced our maintenance costs by utilizing the diagnostics provided by Networkcar. This timely information has enabled us to take a more proactive approach to vehicle maintenance and repair; as well as, arming us with the specific information with which we can direct the work performed by repair facilities. We can now initiate very specific repair requests rather than depending on the recommendations from a repair facility. There are many cost savings associated with this implementation that cannot easily be measured, but the gas savings alone has made this a profitable investment for ATMC.

In Networkcar, Amerizon has provided ATMC with a valuable tool for improving our fleet management and has continued to provide our company with excellent ongoing customer service and support. We look forward to even more improvements in the value of this business relationship and the services it provides.

Best Regards:
